

# Access Hatch

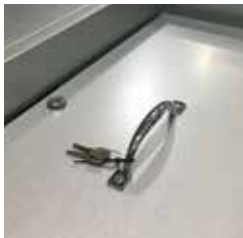

A hatchway provides entry to areas that need to be accessed regularly for maintenance. This can include rooftops and roof cavities, sub floor, or utility spaces such as water tanks, and wall hatches for electrical cabling. Roof access hatches can offer a safer alternative than ladder access to rooftops.

## Customisable to your needs

Hatches can be custom made according to your site requirements. We can make your hatch to suit all common roof profiles. In situations where height is restricted or a site is exposed to strong winds, a sliding hatch may be preferred.

Depending on the intended use of the hatch, locks and handles can be positioned externally or internally. Hinged hatches include piano hinges and gas struts, with several lock options available.

## Order Today

D pull handle

Hasp and latch lock

Keyed barrel lock with rubber seal

Padbolt

Deadlock

Keyed barrel lock
