

Laser Welding

Laser welding is ideal for high-precision, high-speed applications, especially for thin metals. Roofing & Sheetmetal Centre can laser weld sheet metals like stainless steel, aluminium and galvanised steel in gauges between 1.2mm to 2mm.

Benefits of welded roofing and building products

- Superior weld quality - the minimal amount of heat generated in the welding process creates minimal distortion
- Greater strength - you get a strong weld with excellent visual appearance, perfect for fine detailing
- Welding at thinner gauges
- Cost effective - when laser welding, you can use lighter gauge metals so you save on material costs
- Longer product lifespan with less ongoing maintenance required

Roofing & Sheetmetal Centre welds a range of rainwater products including rainheads, sumps, chutes, downpipes, pops and offsets, and more.
